SUMMARY

Full Stack Engineer with years of experience in web and mobile app development. Highly proficient in React.js for building dynamic and scalable front-end applications, with solid expertise in backend development using Node.js and Golang. Experienced in designing and implementing robust APIs, optimizing performance, and integrating modern technologies. Passionate about building efficient, user-centric solutions and continuously improving development workflows.

WORK EXPERIENCE

Sprint Asia

Full Stack Engineer (June 2024 - current)

- Spearheaded the transformation of Sprint Asia's flagship products, Prezent, Prezent Loyalty and Sandeza Bills, from monolithic architecture to dynamic microservices, significantly improving scalability and flexibility.
- Elevated code architecture to boost performance, scalability, and security, ensuring a robust foundation for future development.
- Oversaw the management of custom packages for Prezent and Sandeza Bills on the npm platform, streamlining package deployment and version control.
- Executed seamless deployments of Prezent and Sandeza Bills to both staging and production environments, optimizing workflow and minimizing downtime.

Kolabora Group

Front End Developer (Sept 2022 - May 2024)

- Drove the end-to-end development of Kolabora's innovative product, Kolabora Smart System (KSS), an all-in-one productivity app built from the ground up.
- Crafted dynamic web applications using React.js and Next.js, delivering a seamless user experience.
- Developed mobile applications with React Native and Expo, ensuring cross-platform functionality and performance.
- Successfully managed mobile app submissions to both the Play Store and App Store, navigating all compliance and quality assurance processes.
- Designed robust architecture for frontend projects, setting a strong foundation for scalability and maintainability.

Integrated real-time chat functionality using WebSocket (Pusher), enhancing user engagement and communication.

- Developed multiple modules for KSS, including HRGA, CRM, Finance, Warehouse, and Project & Task Management systems, along with a comprehensive real-time chat feature.

PROJECT EXPERIENCE

Prezent Loyalty

A comprehensive loyalty management platform built for businesses to manage customer rewards, engagement, and inventory.

- Led frontend development for multiple core modules: Inventory, Reward, Deposit, and Tier Level.
- Collaborated with product management to implement backend changes in the Inventory module as part of a feature request
- Developed a Progressive Web App (PWA) to serve clients lacking their own mobile loyalty application, ensuring fast, offline-capable access.
- Designed and structured the application's architecture for scalable deployment in both staging and production environments.
- Ensured maintainable and modular code across the frontend stack using modern frameworks and best practices.

Kolabora Smart System & Nest

A productivity and business management platform featuring HR, Customer Relation, finance, warehouse, task management, and real-time chat modules.

- Built the entire frontend architecture from scratch using React and Next.js, focusing on performance and scalability.
- Developed a real-time chat feature using Pusher and WebSocket for instant team communication.
- Created the mobile app version called Nest independently using React Native and Expo.
- Implemented push notifications for the mobile app using Firebase Cloud Messaging (FCM) and Google Cloud Messaging (GCM).
- Managed deployment of the Nest app to both the App Store and Google Play Store, ensuring compliance with platform standards.

Radix Dashboard App

A dashboard application for a multinational export-import company to digitalize operational workflows.

- Built the app end-to-end using React + Vite for the frontend and Golang for the backend.
- Developed modules for managing invoicing, quotation generation, and shipment documentation.
- Implemented automation features to generate work letters and travel documents based on predefined business logic.
- Ensured seamless user experience with a fast and modern frontend architecture, while handling business-critical processes in a secure backend.

EDUCATION

- **Purwadhika Digital Technology School (2022)**
Full Stack Web Developer
- **Trisakti University (2021)**
Mining Engineering

LICENSES & CERTIFICATION

- [Full Stack Web Developer \(Aug 2022\)](#)
Held by Purwadhika Digital Technology School
- [Purwadhika Best Student Award \(Oct 2022\)](#)
Held by Purwadhika Digital Technology School
